

... About us

ITD - history and philosophy

The ITD GmbH was founded in 1995. The objective was and is still as current today as five years ago - to develop and market innovative products in modern design and optimal quality at the highest technical level and at reasonable prices.

The mobile equipment cart has quickly developed itself into the absolute runner. From the equipment cart classic-cart, the product lines uni-cart (for smaller medical-technical devices), duo-cart (as a PC and measuring equipment cart) and endo-cart (as an ERCP-cart for endoscopy) have evolved. All 4 equipment cart lines are modularly constructed and belong to a module system, i.e. the separate assemblies and accessories are compatible.

With this range of products multiple applications can be realised in the medical area as well as in the industrial utilisation area.

The head office of the ITD is Unterhaching, in the south of the City of Munich, Germany. Our equipment carts are developed and sold here. The equipment carts are manufactured and dispatched in our production site in the heart of the County of Lower Bavaria, Germany.

ITD at MEDICA trade fair in Dusseldorf, Germany.

... Choosing your individual ITD equipment cart

Dear customer,

With our new catalogue which for the first time contains the whole range of products we would once again like to convince you of the capacity, innovative power and flexibility of our products and our firm.

Nevertheless, this is only a fraction of the possibilities which our modular equipment cart-system offers you. With the configuration of the equipment cart optimal for your application, we are depending on your assistance because only you know exactly which spatial circumstances are to be taken into consideration and how the different device types are to be deployed or how their dimensions should be. Therefore, please read through the steps specified below and define your model on the basis of the ascertained information.

We are happy to be of assistance to you at all times in an advisory capacity because we would like to both win and retain you as a satisfied customer.

1. Space

First define the space you need for the accommodation of your devices (dimensions and number of the devices).

2. Partitioning

Consider where the devices should be placed in the cart. The other equipment is then directed with different shelves, drawers etc, and naturally the assembly of the separate accessory parts.

3. Selection

Select one of the standard models from the product lines uni-cart, classic-cart and endo-cart which comes close to your desires. Due to the modular arrangement of the equipment carts and the accessories you can choose from the accessories section of the catalogue the parts which are not yet contained in the standard model. You can also exchange parts from the standard model for others and therefore put together your own completely individual cart. Naturally, you also have the possibility of configuring a completely tailor-made model from our modular components, the basic frame + accessories. We are happy to be of assistance to you at all times in an advisory capacity regarding the selection and composition of your ITD equipment cart. Please call us! We are gladly there for you!

4. Special models

There is also the possibility that you do not find the ideal cart in our catalogue because, for example, you need a special height or the cart should be adapted to your corporate design and colour. In such cases you have the correct partner in the ITD, because we are fast and flexible in the implementation of customer's special desires.

Colour selection for decoration elements (corner elements and decoration cover strips):

Our article numbers are represented in the manner of writing GW 0000. **X**. This ".X" is a place holder for our **standard colours**. Replace .X with ".1" if you would like the decoration elements in RAL 5021 clear-blue, with ".2" for RAL 5013 cobalt blue and with ".3" for RAL 7035 light grey.

If you would like a **special colour**, please, get in touch with us.
