COMBIPORT® Wound Irrigation Device

A Revolutionary New Way to Cleanse...

Wound irrigation is necessary to wash out bacteria as well as other microscopic contaminants. Although the traditional syringe and catheter based method has been used for many years, this old fashion method is costly, slower and somewhat cumbersome. In an emergency setting, where every second counts, the Combiport® method is faster, easier and more cost effective.

A Simple 3-Step Procedure:

1. Peel open pouch and remove Combiport®
2. Remove spike guard and spike bag of saline
3. Remove nozzle cap and squeeze bag to create pressure

Combiport® Features & Advantages

- Convenient sterile peel open pouch
- Removable cap for easy stop/start during cleansing procedure
- Universal end port fits standard IV bags
- Ease of use
- Minimal set-up time
- Ability to administer a high volume of fluid in a short period of time
- Cost effective (1/2 the price of traditional methods)

COMBIGUARD™ Irrigation Splash Guard

Innovative splash guard has an angled inlet and dual outlet ports. This angled inlet directs the fluid stream away and toward the dual outlet ports. Standard female luer slip mates with Combiport® wound irrigation spike, male luer syringes and other wound irrigation devices.

Combiguard™ Feature & Advantages

- Protects against splash back during wound irrigation
- Angled inlet to flush contaminants toward outlets
- Outlets direct contaminated fluid away from wound
- Smooth rounded edge against patient skin
- Clear plastic for best visibility
- Female luer inlet can be used with Combiport®, male luer tip syringes, and other wound irrigation devices
- Convenient, sterile, peel open pouch*

INFU-SURG® DISPOSABLE PRESSURE INFUSER BAG

- Simple To Use
 - Pressurizes and deflates easily with just one hand
 - Oval shaped bulb eases inflation of bladder
 - Transparent front panel allows visual checking of fluids
 - Area to write patient information
 - No external power source required
 - Available in multiple sizes
- Reliable
 - Maintains desired infusion pressure
- Cost Effective
 - Lower relative cost
- Color-Coded Gauge
 - Is easy to read
 - Indicator moves up as pressure increases
- Totally Safe
 - Safety valve prevents over inflation of bag
- Loads quickly and easily
- Completely Disposable
 - For single patient use to prevent cross contamination
 - Eliminates time-consuming cleaning & repair

SURGI-PRESS® INFUSER

- User Friendly
 - High strength clear plastic window for easy viewing of fluid
 - Designed to function with standard 500cc fluid bag
 - Wide opening for rapid easy insertion
- Simple to Operate
 - Insert bag
 - Wind it up
 - Let it run
- Durable
 - Solid case molded from glass fiber reinforced polypropylene
- Reliable
 - Solid-driven piston exerts continuous pressure on fluid bag
 - Minimum variation in pressure
- Time Saving
 - No periodic pumping required
 - No gauge or bulb to monitor
- Cleans and Stores Easily
 - Comes in individually packaged boxes

NO-MES®

Charcoal Administration Kit

Minimizes charcoal mess! The No-Mes® Kit is a fully closed system designed to administer charcoal without exposure to messy solutions. Multiport connector accepts charcoal in threaded tube style containers, tapered tip bottles and catheter tip syringes. Attached solution bag provides an easy method of clearing the stomach tube of charcoal. Bite Block and twist key help simplify the procedure. Multiple kits available.

Features & Advantages

- Fully closed system protects from exposure to messy charcoal
- Mates with many types of commercially available charcoal
- Flushing system ensures total charcoal delivery to the stomach
- Stepped universal connector adapts to most lavage tubes
- Includes Twist-Lok™, Bite Block, and 18fr tube
- Available with and without charcoal
- Easy set-up and clean-up
- Completely disposable
- Cost effective
