FREE AT LAST

in the field, ThinkFree Office can be their "Office away from Office", as they can run their programs and access their files and folders from any computer, regardless of platform - Windows, UNIX, Linux, or Mac.

UNIX/Linux Users:
- Free word processing, spreadsheet and presentation graphics software
- Send and receive cross-platform e-mail attachments
- Close your Windows
- No more blue screen, no more rebooting into Windows, no more emulation

You're a power user. What do you need with Office programs? Still, you do need to be on the same page with the rest of the company. You know, receiving e-mail and attachments, writing the occasional letter, or creating a spreadsheet or presentation. But do you really need Windows taking up valuable real estate? Not any more. With ThinkFree Office, UNIX or Linux is all you need. Now you can edit e-mail attachments and work on Windows files right on your own computer without thinking about Microsoft. Store it in your ThinkSafe cyberfolder, access it and work on it from your machine at home. Or share it with your workgroup.

Your Workplace in Cyberspace™
We created ThinkFree Office specifically for the Internet, so it's no disk hog. It's thin and fast. And it uses all of the Internet's advantages to your advantage - mobility, ubiquity, productivity and freedom.

ThinkFree Office gives you a suite of familiar, easy-to-use applications, free of charge. Word processing, spreadsheet, presentation graphics, address book, e-mail client and file manager.

ThinkFree Office is yours with a fast, one-time download. One click and the entire suite downloads in as little as 2 minutes via xDSL.

Your ThinkFree Office applications and data pop open and run just as fast as Microsoft Office.

Save your files in your ThinkSafe cyberfolder or on your hard drive.

You get 20 MB free and can buy more for a small fee. "ThinkSync™" automatically synchronizes your hard drive and ThinkSafe cyberfolder.

Run your applications and access your folders and files from any computer, anywhere, anytime, regardless of operating system - Windows, Mac, UNIX or Linux. Your security is foremost. ThinkFree Office and your ThinkSafe cyberfolder feature secure, end-to-end data transmission. They're safeguarded by DES encryption, authentication, password protection and a secure physical location.

ThinkFree Office is your safeguard against data loss. Your ThinkSafe cyberfolder doubles as a secure online backup system.

ThinkFree Office runs online or offline. It can be launched from our website or from your own disk. So you can take your applications anywhere - even on a plane - and work wherever you go.

You have complete privacy, but can allow others to access your files, so you can share files without wasting time on huge, plodding or broken e-mail attachments. Plus, you don't have to deal with extra-large attachments getting bounced off the server.

ThinkFree Office is the perfect companion to Microsoft Office. It's familiar, like Microsoft Office. And your files work on both, so you can use Microsoft Office at work, and ThinkFree Office at home and on the go.

All this... Free? What's the catch? There is no catch. ThinkFree Office, including software, 20 MB of web storage and anywhere, anytime access is free. We'll continue to add free services, as well as new premium services, which will have a nominal fee. You can also purchase more storage space, if you need more than the free 20 MB. Sign up now. It's computing freedom. It's completely free.

About Us
The company currently employs 100+ people worldwide, including a seasoned management team that offers a wide-range of business and industry expertise in technologies and markets including the Internet, desktop software, consumer ecommerce and enterprise solutions. With an ever-growing research and development group, ThinkFree.com is committed to responding to user demand for Web-based solutions that help individuals keep pace with today's world. ThinkFree.com is privately held and is venture-backed by Massachusetts-based Prism Venture Partners. A rapidly growing company, ThinkFree.com plans to double its staff in 2000.

Thinkfree Office is...
All About Freedom

First of all, IT'S FREE. But it's the awesome possibilities of a ThinkFree World that will make you want to sign up, start up and ThinkFree for yourself.

A Suite of Truly Usable Office Programs Free At Last!

ThinkFree Office™ gives you a suite of familiar, easy-to-use applications, free of charge: word processing, spreadsheet, presentation graphics, e-mail client, address book, file storage and backup. You'll be comfortable with it from the start.

Use our suite of Microsoft Office-compatible applications to work on your documents, spreadsheets, presentations or e-mail anywhere, anytime (or use your Microsoft Office applications with ThinkFree Office). Store your files and folders in your web-based ThinkSafe™ cyberfolder... Travel to a different location... Log in and work on your documents from any computer with any operating system... Across the hall, across town, across campus or across the globe.

### ThinkFree Office™ Takes Microsoft Office™ Places it's Never Been

Unlike other web-based folder systems that are limited to storage, ThinkSafe Office is a suite of truly usable office programs. They're similar to Microsoft Office, so you can get started right away. No re-learning required. ThinkFree Office liberates Microsoft Office from the desktop, extending Microsoft's already impressive capabilities to the web. It's like having Microsoft Office on your hard drive and on the web.

Cross-Platform Support: Windows, Mac, UNIX or Linux

With ThinkFree Office you can sit down at any computer with a browser, anywhere in the world, and have complete freedom to run your programs and access your folders and files.

Your Choice: Work Online or Offline

Now you can disconnect from the Internet without disconnecting from your work. With ThinkFree Office you really can work anywhere, even on a plane.

Word Processing
Sreadsheets
Presentations
e-Mail...

It's like having Microsoft Office on your hard drive and on the web.

Travelers:
ThinkFree Office is your workplace in cyberspace.
- Your mobile office on the web
- Works on any version of any operating system
- Instant data recovery due to travel hazard loss
- No laptop required

You have a major presentation across the globe and you have all of your materials prepared ahead of schedule. But when you arrive at the hotel, there's a message waiting for you: The geniuses back at headquarters decided to change the pricing structure. You calmly proceed to the hotel's business center or the nearest Kinko's, sit down, access your ThinkFree Office, open your documents, and revise your presentation.

Commuters:
Your files are never in the wrong location.
- Connects your home and office
- Works on any operating system
- Privacy of personal files at work
- Free, "guilt-free" software

You've been using the ThinkFree Office suite at home to update your resume. It's great because it works like the Microsoft Word you have at work, but it doesn't eat up the disk space your kids need for games. Trouble is, your resume is at home and you're at work. Trouble? What trouble? You access your ThinkSafe cyberfolder, get your resume, update it and e-mail it from your desk: simply, safely and secretly.

Organizations:
A Tiered Office Solution™ to optimize your Microsoft Office investment.
- Tiered office solution by user requirements
- Lower Total Cost of Ownership (TCO)
- Your "Office away from Office™"
- Any operating system - Windows, UNIX, Linux, Mac

Everyone in the Organization needs a computer, but not everyone needs (or wants) all the features of Microsoft Office. And you certainly don't need the high Total Cost of Ownership (TCO) that comes from owning all that software: License fees, maintenance, file servers, upgrades, repair, support, etc. Talk about "bloatware"!

With ThinkFree Office, you can easily match job function with software functionality. Let those who need it have Microsoft Office, and get the others signed up on ThinkFree Office. And when your high-powered users are
