

THE RT OF ARCHITECTURE

The process of creating Viceroy's panelized and pre-cut homes begins in our extensive design department. Here, our team of architects, engineers and drafting professionals produces architectural and working drawings for site construction, as well as production details for the manufacturing process. We have an extensive catalogue showcasing a diverse collection of in-house designs, many highlighted by a broad expanse of windows and an inspired sense of spaciousness. As well, Viceroy can work from your original plans.

A WORLD OF DESIGN SOLUTIONS Our select team of senior designers know how to meet our customers' requirements. Viceroy's design group has worked with clients around the world to create a wide variety of projects, utilizing a complex range of architectural styles. These include single family homes, duplexes, multi-family townhouses, low-rise walk up apartments, low-rise commercial buildings, and barrier-free housing. We offer you a flexible choice of exceptional single and multi-family home designs, or we can work with your drawings.

WE UNDERSTAND YOUR NEEDS Viceroy has separate design teams for each major international region. These multi-lingual teams are intimately familiar with local building regulations and customs. This knowledge also allows us to work more closely with our clients in establishing designs that are ideally suited for their special needs. In addition, each group has a team captain responsible for quality control from an architectural point of view. It is this exceptional level of attention to detail that makes a world of difference in a Viceroy home.

Our design department works with today's most advanced CAD systems utilizing Autocad, innovative custom software and other leading-edge tools such as the internet.
